

Asset Lifecycle Platform

The Asset Lifecycle Platform (ALP) is an AI-native, agentic system that digitizes the end-to-end new store opening journey to enable stores to open faster, at lower cost, and with predictable, auditable outcomes. It enables real-time visibility, tracking, and governance; transparency of progress and roadblocks; accountability and ownership; automation for efficiency and cost control; data-driven decision making; seamless collaboration across teams; standardized compliance and risk management; and performance monitoring for continuous improvement

Expected Outcomes

Outcome	Metric	How will we achieve it
Faster Time-to-Open	Reduce site network planning to launch time	Realtime Visibility, AI-driven visibility → Lease → Design & Construction → Procurement → Handover with AI orchestration, SLA checklists, launch calendar.
Lower Cost & Capex Variance	Realtime tracking for Capex variance vs APEX	Digitalisation of design, process, digital dashboards, lifecycle cost monitoring for individual assets.
Higher Decision Quality & Site ROI	Site due diligence based on real data & Network planning	Stage wise evaluation, SER/recce intake, Feasibility Engine with P&L templates and AOP approvals.

Top Workflows that drive the outcomes

#	Workflow	Objective	Metrics
1	Planning & Intake	Improve Network Planning (GIS+Demographics + catchment scoring, shortlist & approvals).	Sites achieving target revenue within threshold percent 95±5%
2	Feasibility & APEX Governance	Realtime visibility for time and cost during progress and legal contracts.	Approval timeline based on standard SLA
3	Build & Cost Control Tower	Digitise Procurement & Vendor Management, enable Daily Progress Updates, Auto alerts during scope variance.	BoQ variance Percent; QC/HSE breach percent; DPR compliance percent; PR→PO cycle time
4	Handover & Launch lifecycle	Implement checklists & SLAs, Planning & tracking of Launch calendars & escalation.	On-time HOTO percent; closure SLA percent; D-day readiness index.
5	Facilities, Asset & Compliance Ops	Enable Management of Facilities Work Order & SLA + Preventive Maintenance Scheduler Monitoring of Asset Lifecycle, ticketing hub & vendor routing, permit repository & alerts.	On-time closure of tickets without escalation percent, Equipment Uptime rate, On-time renewal of Warranty/AMC percent.
6	Performance & Monitoring	Measure Performance Variance + post-launch reviews - Sales, Revenue, customer experience	Variance analysis on feasibility
