

Login screen

The login screen features a white background with a thin black border. At the top, the text 'Welcome to Reliance' is centered in a dark grey font. Below it, 'Sign in with Reliance account' is also centered. The form consists of two input fields: 'User name' with a person icon on the right, and 'Password' with a lock icon on the right. Both fields have light grey borders. Below the fields is a large, rounded teal button with the word 'Login' in white. At the bottom, there is a link 'Forgot Password' in teal, followed by a small teal question mark icon.

[Forgot Password](#) 

1. Based on the email ID, we should be able to detect which team is the user from (RE, Business format, which state, etc.) and accordingly his access level information should be applied to the platform
2. For RE team, we need to know whether
 - a. he's from NHQ or
 - b. State team (which state exactly)
3. For business team, we would need
 - a. Which format category
 - b. Which region/ state
4. The core requirements of SAML login implemented earlier should be followed here.
5. We would also need a way to test the platform while it is getting developed over the next few months. Hence would need users without RIL IDs to enter.

Context about teams

This section is about key teams and their structure who would use this ALP platform.

1. This sheet has the list of business and geography values - [link](#)
2. Context for team structure:
 - a. Real Estate team (RE team)
 - i. Has teams in all states (RE-State)
 - ii. Has a central team at National Level (RE-NHQ)
 - iii. Legal team is also part of RE (or works closely with RE) and is present at both levels
 - b. Business teams (referred as BT or NSO - New Store Opening Team)
 - i. There are 'format categories' like 'Fashion and Lifestyle', 'Value Formats'
 - ii. And then there are formats under these categories. E.g. Ajo, Trends are formats under Fashion and Lifestyle. Fresh, Smart Bazaar, etc. are formats under Value Formats.
 - iii. Teams are formed under Format Category level (not at format level for the purpose of ALP access)
 - iv. But each Format Category will have state or region specific teams and we will have to restrict edit access of leads accordingly. (to be discussed later in this doc)
 - v. There would be leaders who would lead a particular format category and then leaders who would need access to see all format categories' progress.
 - vi. Refer screenshot below. Please note, there are more than 100 formats and we will start with only grocery related formats.
 - c. EPC team
 - i. This team is responsible for procurement and construction of each site once approved.
 - ii. No hierarchy shared with me yet.

Format Category	Format
NSO Fashion & Lifestyle	VRK Heritage
NSO Fashion & Lifestyle	Wholesale
NSO Fashion & Lifestyle	Yousta
NSO Fashion & Lifestyle	Zivame EBO
NSO Consumer Electronics	Bismi Connect
NSO Consumer Electronics	Digital Stores (3K)
NSO Consumer Electronics	Digital Stores (CDIT)
NSO Consumer Electronics	MyJio Stores (Mini DX)
NSO Consumer Electronics	New Digital Format
NSO Value Formats	Bismi Hypermarket
NSO Value Formats	BISMI Market
NSO Value Formats	Easy Day
NSO Value Formats	Fresh
NSO Value Formats	Fresh Express
NSO Value Formats	Freshpik
NSO Value Formats	GoFresh
NSO Value Formats	Heritage

3. RE team

- State RE teams will always see data from their state ONLY. E.g. Maharashtra state RE team will see leads in cards, table, and their details only for Maharashtra team

and no other state. And they will see leads from Maharashtra from all businesses (called Format category and formats) like grocery, lifestyle, digital, etc.

- b. Effectively, in the table on the home page, the state filter gets auto-applied and they cannot change that.
- c. RE team's dashboard has 5 cards at the top. These cards are different for BT (Business team). Logic for their status change is captured here - <https://docs.google.com/document/d/1ls7OzJyHLpszuAzclRHFtRUuJdlHs7GZ29STMEQifBs/edit?tab=t.0>
- d. On the card, there should be a text - (a) Leads data for Punjab (b) Leads data for all states. These would be based on who has signed in and has what level of access. If one applied a filter at the table present below the cards, we will not change the numbers on the card.
- e. The same filter for state teams will be applicable when they click on 'View details' link and check the detailed table.

Format Category	Format	ADP	Operation	RFC Under Flouts (B)	RFC Offered (C)	Confirmed Properties (D)	Total (E+A+B+C+D)	Balance to Acquire	Under Apex Approval (F)	Under BT Approval
Fashion & Lifestyle - Apparel	Trends	-	-	-	-	-	-	-	-	-
	Youta	-	-	-	-	-	-	-	-	-
	Azorte	-	-	-	-	-	-	-	-	-
	Trends Man	-	-	-	-	-	-	-	-	-
	Trends Woman	-	-	-	-	-	-	-	-	-
	Trends Junior	-	-	-	-	-	-	-	-	-
	Fashion Factory	-	-	-	-	-	-	-	-	-
	Trends Footwear	-	-	-	-	-	-	-	-	-
	Catwalk	-	-	-	-	-	-	-	-	-
	Lee Cooper Shoes	-	-	-	-	-	-	-	-	-
	Performax	-	-	-	-	-	-	-	-	-
	Portico EBO	-	-	-	-	-	-	-	-	-
	Avantra	-	-	-	-	-	-	-	-	-
	Kalankethan	-	-	-	-	-	-	-	-	-
	VRK Heritage	-	-	-	-	-	-	-	-	-
	Swadesh	-	-	-	-	-	-	-	-	-
	Sub-Total	-	-	-	-	-	-	-	-	-
Fashion & Lifestyle-Other	Cover Story	-	-	-	-	-	-	-	-	-
	Ancestry	-	-	-	-	-	-	-	-	-
	Foundry	-	-	-	-	-	-	-	-	-

- f. There are people in the RE team who work at a national level. For them, keep the same dashboard screen including the cards. Effectively, in the table on the home page, ~~the state filter gets auto-applied~~ no state filter gets applied at national level by default and they can apply any state filter they want. **This removes the need to have a different view for leadership for MVP in March.**

4. Business Team/ NSO:

- a. While the state team will see lead data only for their respective state, the business team will see data only for their respective business. E.g. grocery business will see and take actions on data only for grocery business and so on.
- b. BUT, the business team members will be able to see data across all states.
- c. **Based on new info, the business team is also divided into different geographical units (regions or states). While the business team can see data**

from all states, they should only have the privilege to create a new lead to their respective region/ state ONLY.

- d. In the table on the home page, the Format Category filter gets auto-applied and they cannot change that.
- e. BT team's dashboard has 5 cards at the top. Logic for their status change is captured here -
<https://docs.google.com/document/d/1ls7OzJyHLpszuAzclRHFtRUuJdlHs7GZ29STMEQifBs/edit?tab=t.0>
- f. On the card, there should be a text - (a) Leads data for grocery format (b) Leads data for Lifestyle format category (c) Leads data for all formats. These texts are indicative and will change based on the format and format category applicable. Also, these would be based on who has signed in and has what level of access. If one applied a filter at the table present below the cards, we will not change the numbers on the cards at the top.
- g. The same filter for BT teams will be applicable when they click on 'View details' link and check the detailed table.

- h. There would be executives who work at Format category level (say Fashion and Lifestyle - apparel) and some leaders who would have access to all format categories. We will map their email ID and give access to data accordingly when they login. There's no need to map employees at Format level.
5. Other simple functionalities are documented on Figma like
 - a. Search - mainly should work for Lead ID or Property name
 - b. Filters
 - c. Multi-select leads to take actions (like delete)
 - d. Add or rearrange columns
 - e. Table scroll, etc.

Status Column in the table

Stick to only these statuses to be shown in the table on the home page -

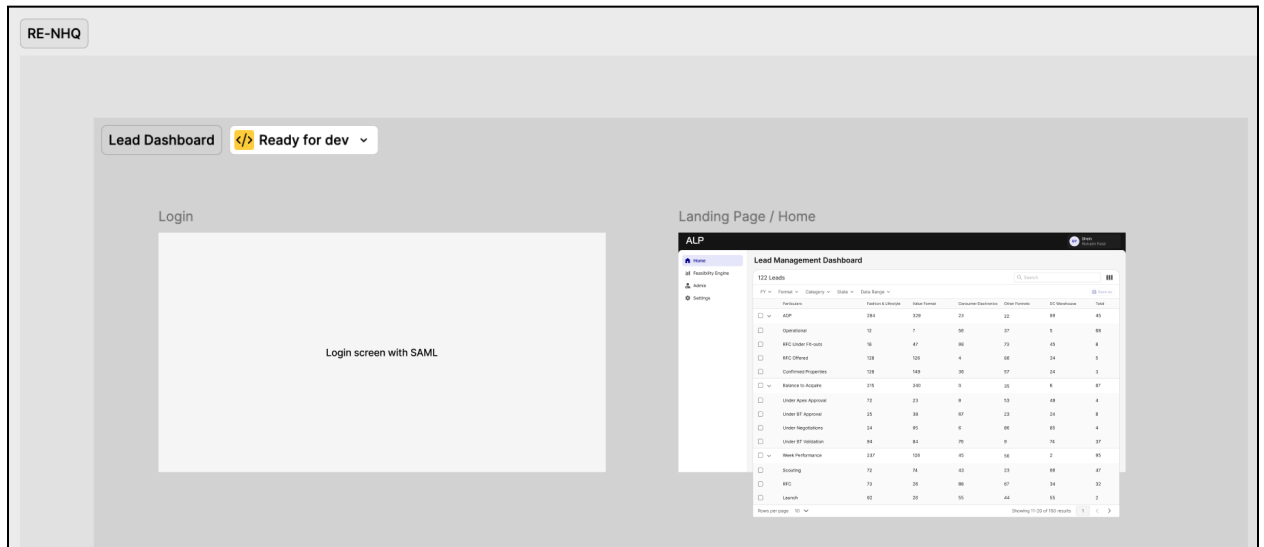

1. Draft
2. New
3. Under BT validation
4. Under Negotiations
5. Under BT approvals
6. Under Apex approval
7. Confirmed Properties
8. RFC offered
9. RFC under fit-outs
10. Operational
11. Rejected

Refer to the same doc for the trigger points for status changes -

<https://docs.google.com/document/d/1ls7OzJyHLpszuAzclRHFtRUuJdlHs7GZ29STMEQjfBs/edit?tab=t.0>

Leadership - Dashboard View

1. For now, let's NOT use this screen in Figma for now (for March release)

2. For leadership view, this is what we can do
 - a. RE leaders - already covered in point 6 within Dashboard section i.e. access to all formats categories across all states
 - b. BT leaders - already covered in point 13 within Dashboard section i.e. access to all formats categories across all states

Create Lead form

1. Starts from the CTA on the home page
2. Mobile UX flow is not in scope for March release
3. Access:
 - a. Both RE and Business team should have access to the create form CTA and eventually the ability to create a lead
 - b. State RE teams should be able to create leads only in their state. So, the state filter should be selected by-default and can't be changed
 - c. Business team should be able to create a lead based on their level
 - i. Format category team - can create lead only in their category across all formats under that category
 - ii. The team members are also region specific - The requirement is to let them create a lead only in their region. E.g. Punjab team members of grocery business cannot create a lead in Karnataka state.
 - iii. But it's okay to 'see' the leads data for all states as long as it belongs to the same format category.
 - d. Access to all format categories (ideally only leaders will have this) - can create leads for any format category in any region.

4. Status change impact (IMP)

- a. When a form is 'saved' with partial information, it creates a lead in the 'draft' state. It starts showing up in the dashboard table, however, the lead ID is not generated yet.
- b. When the form is completely filled and 'Create Lead' CTA is clicked, then the lead ID is generated.
 - i. The Lead ID column on the home page gets updated with this lead ID
 - ii. The status of the lead changes to 'New'

5. Ability to Edit a lead (IMP)

- a. Only the person who's created a lead can edit the lead details
- b. Only the person who's created a lead can add more information to it on the next step i.e. overview tab with attachments and comments.
- c. Once the lead gets 'Submitted to BT', it gets locked and further changes are not allowed.
- d. In the site assessment tab, there are 4 actions that BT team can take on a particular lead, after they do their site assessment.
 - i. Soft approve for next level of analysis and negotiations
 - ii. Reject a lead
 - iii. Put on Hold
 - iv. Send back to RE team with queries
- e. In case, it comes back to the RE team with queries, we can unlock the lead and the same person who created is allowed to add/ edit the lead information on the overview page.

6. Some changes in the UX is expected -

- a. 'Catchment Name' should be there in the first set of fields with a drop down value. The list of values would eventually come from Retail Vista integration. Till then, we will upload a fixed list.
- b. The order of Lat/ Long and Map needs to be re-adjusted.
- c. For more dropdown values, refer to [this doc](#).

Day 3

1. When a lead is clicked on the homepage's table, we land into a lead details page.
2. This lead details page has different sections. Each section is detailed later in this doc.
 - a. Timeline progress widget at the top
 - b. Activity log
 - c. 7 Tabs and their details
 - i. Set 1: Overview, Site Assessment, Validation
 - ii. Set 2: Approvals, Legal, Construction, Payments
 - d. Set 1 tabs are part of core workflow in ALP where critical information is captured inside ALP. Detailed later in this doc.
 - e. Set 2 tabs are expected to be connected to other platforms via Integration after MVP is launched. Detailed later in this doc.
 - f. Forms - We will implement one form - SOW in MVP. Rest will be tagged as 'Coming soon'
 - g. AI summary - Will be done after MVP

Lead ID

Every property lead created in the system will have a unique auto-generated Lead ID.

Component	Meaning	Example
LD	Lead identifier	LD-FY27-0000
FY27	Financial Year	
0000	Sequential auto-generated number	

Ageing

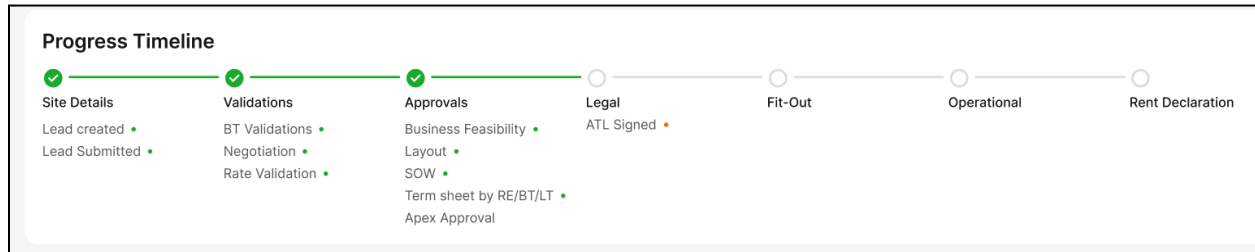

The value will start from the day it was submitted to BT (and not from the day it was created).

If the lead gets rejected. We can stop the counter.

There are two places where we will who ageing (in days) -

1. Dashboard table column for each Lead.
 - a. For rejected leads, we can keep this value blank in the table.
 - b. For all other scenarios, keep the counter on as the day progresses
 - c. It gets stopped when a Site becomes 'Operational'
2. In the lead details page, we have 'Activity log'. All actions shown there will also have the 'Day N' tag to it.

Progress Timeline widget

L1	L2	Trigger logic for green
Site Details	Lead Created	After Lead ID is generated
	Lead Submitted	After submitted to BT
Validations	Site Assessment	After Soft approval update
	Business Feasibility	After approval by BT
Approvals	Site Approvals	After 4 site approvals are updated as Approved
	BT Approvals	After all BT approvals are green except APEX
	APEX approval	Explicit card update
Legal	LDD	Explicit card update
	LOI	Explicit card update
	Agreement Registered	Explicit card update
Fit-out	SDR	Explicit card update
	RFC offered	Explicit card update
Operational	Store Operational	Explicit card update

In case of negative action (rejection), just make the dot red at L2.

Activity Log

This section is to show the progress of different stages of lead alongwith time

1. Name of the activity.
 - a. Please note that **it could be named a bit different for the same status change trigger**
2. Time stamp
 - a. Activities that would be linked to updating card status in Set 2 tabs (Approvals, Legal, Construction, Payment), the date should be based on the Date Selected in that card and not when the card was updated manually.
3. Day N
 - a. Where N is 0 when a lead gets submitted to BT by RE on the Overview tab
 - b. And from then, it keeps going up as the dates change
 - c. For 'Lead Created' activity, we can remove 'Day N' tag as it happens before day 0
4. The order of activities will be - latest update on top.
5. Any status change or edit should also be reflected
6. After a lead gets submitted to BT, a lot of activities start in parallel that are mentioned across tabs, like LDD in legal, SDR in Construction tab. If these get completed and someone updates their respective cards, then it should reflect in the activity log. Even though it may appear that approvals need to happen before some activities, this widget should just listen to what gets updated first and reflect that in the reverse chronological order (latest activity at the top).
7. Negative action: In case of any 'Rejected' update, we should just show a red dot with cross.
8. Neutral update: In case of 'On hold' or 'Not Applicable', keep it grey dot.

View More ▾

Name of the activity in the widget	Trigger point
Lead Created	When Lead ID is generated
Lead Submitted to Business	When RE clicks ‘Submit to BT’ on overview tab
Soft Approval after site assessment	When BT team selects ‘Soft Approval’ in the site assessment tab
Lead on hold after site assessment	When BT team selects ‘Put on hold’ in the site assessment tab.
Query raised to RE after site assessment	When BT team selects ‘Raise a query to RE Team’ in the site assessment tab.
Lead rejected after site assessment	When BT team selects ‘Reject’ in the site assessment tab.
Business Feasibility Approved	After " Update " Button - Business Feasibility Approval card on the Validation tab. (this is same as status changing to ‘Under BT Approvals’)
All other approval names in the cards across Approval, Legal, Construction, Payment tabs. E.g. APEX Approval, Termsheet Approval, RFC Offered, SDR etc. Pls note - in future, the cards and their names might change based on feedback. But our	Based on when the cards were updated manually. But use the date that was selected while updating the card.

logic remains the same.	
Site Operational	When in fit-out, the 'Operational' card is updated.

‘Overview’ tab

1. This section covers all information that was entered in the lead creation form
2. This section will be editable for ONLY the person who created the lead.
3. Only that person can see the CTA ‘Submit to BT’ and take action.
4. Everyone else across all functions (RE, BT) will just be able to see this lead. People can reach here by clicking on the Lead table on the home page. So, effectively only those who can see this lead on the home page can land on this page.
5. Additional information gets uploaded here (Layout, PPT, initial termsheet) beyond what was captured in the lead creation form
6. Once the lead creator submits this to BT (via the CTA), it gets locked and he won’t be able to edit it further.
7. Only when the business team sends it back via ‘Raise a query to RE’ update on the site assessment page, then only this page becomes editable again and only to the creator of the lead.
8. The design remains the same for everyone who comes to this page.

Business Potential Assesment
Overall Business Potential* ⓘ

This location in Square One Mall presents a promising business opportunity due to its Location.

Competing Stores Analysis* ⓘ

The primary competitors are located on the second floor, including The Bay and H&M.

Catchment Analysis* ⓘ

The mall attracts a diverse customer base from Dadar, Worli, and Thane.

Sales Projection* ⓘ

Projected sales for this location in Square One Mall are expected to reach ₹850,000 in the first year, with a 15% increase in the second year due to increased brand awareness and customer loyalty.

Select Status

Select Status

Update

1. Access:
 - a. Only the business team should have access to update this tab.
 - b. As of now, assume everyone in that format category BUT in that relevant geographical region/ state should have access to update.
2. Visit date field - should have a date picker (and not name as mentioned in Figma/ Screenshot)
3. 'Visited by' will be a free text field with multiple names that can be entered
4. There are four fields (free text for now) where BT is expected to fill and share their observations.

5. They can add information, change it and save several times before they finally update the status at the bottom.
6. After this, they can do 4 things up update the status at the bottom:
 - a. Soft approval - This means they want to go ahead and do further analysis
 - b. Reject - they don't like the site
 - c. On Hold - they may need more time to decide
 - d. Raise a query to RE - they may have some open questions that can be answered by RE team.
7. Whenever they take any action, a read only version of this page gets visible to the RE team on the same tab with whatever observation they have captured in those free text fields. Along with the final update status at the bottom.
8. EDIT - Once the status is updated,
 - a. Soft approval -
 - i. Next tab 'Validation' becomes editable for the business team. Till then it will not be activated.
 - ii. Overall lead status changes to 'Under Negotiation'
 - iii. (refer point 10 below)
 - b. Reject - Lead gets rejected and locked for anyone to make any changes
 - c. On Hold - they may need more time to decide. It remains editable to the business team.
 - d. Raise a query to RE - It goes back to the RE team to edit lead details in the 'Overview' tab. And it gets locked for the BT team to make any edit. However, whatever observation they have entered in the Site Assessment fields remain as it is, and not get deleted.
9. Minor modification - Make the tab name 'Site assessment'. It's called 'Site visit assessment' which is very long.
10. Once it is 'Soft approved', the following read only section should be shown in this tab for both RE and BT. (currently it is shown at the top of next tab)

Physical Site Visit Completed

Business Team has conducted on-site evaluation

Verified

Business Potential

High potential area with strong demographics. Office catchment of 50,000+ employees within 2km radius. Estimated monthly revenue: ₹85-95 lakhs.

Sales Projections

Year 1: ₹12Cr, Year 2: ₹14.5Cr, Year 3: ₹16.8Cr. Average ticket size: ₹1,500. Projected daily footfall: 6,000-7,500 customers.

Catchment Analysis

Primary catchment: 2km radius covering 45,000 households. SEC A+B: 65%. High weekend footfall from nearby residential towers (15,000+ units). Metro station 500m away.

Competing Stores

2 direct competitors identified: D-Mart (2.3km away, ₹180Cr annual turnover), Big Bazaar (3.1km, ₹120Cr). Market gap for premium positioning.

Validation tab

This is the phase where the business team does a detailed analysis of a site wrt its commercial aspects (rent, revenue potential) and also captures subjective observations.

1. This tab has three key sections
 - a. Detailed analysis to be added by the BT team, including free texts and attachments.
 - b. Feasibility Engine: Scoring by AI
 - i. This will be detailed out in the next section. Currently blocked on an external team.
 - c. Approval CTA
2. Access:
 - a. Only the Business Team who had access to the previous 'Assessment' tab, will have access to this to add more details.
 - b. For now, assume the same team will have access to add details in the form of free text and attachments
 - c. The same team or someone specific in that team will have the privilege to update the approval card at the bottom.
3. Edit privilege:
 - a. The fields could be edited and saved till the final CTA at the bottom of the sheet for 'Business Feasibility' is approved. After that, it can't be edited.
4. Top section in Figma about site assessment will be removed from here. This will reflect in the previous tab.

Physical Site Visit Completed

Business Team has conducted on-site evaluation

Business Potential

High potential area with strong demographics. Office catchment of 50,000+ employees within 2km radius. Estimated monthly revenue: ₹85-95 lakhs.

Sales Projections

Year 1: ₹12Cr, Year 2: ₹14.5Cr, Year 3: ₹16.8Cr. Average ticket size: ₹1,500. Projected daily footfall: 6,000-7,500 customers.

Catchment Analysis

Primary catchment: 2km radius covering 45,000 households. SEC A+B: 65%. High weekend footfall from nearby residential towers (15,000+ units). Metro station 500m away.

Competing Stores

5. After March, the information captured on this tab may be required to be sent to the 'Board' platform via integration.

Business Feasibility - AI Scoring

(This is dependent on us getting information from another tool called Retail Vista which is still under development. We will get back on this. In parallel, this section's PRD is being worked upon)

Workflow happening outside of ALP but shown here

This is about the last 4 stages (tabs) - **Approval, Legal, Construction, Payments**, on the lead details page. The workflows are critical and would continue to happen outside ALP - either offline or on some other platform.

The intent is to ensure we provide

1. Re-direction from these tabs to those platforms via integration so that they don't have to login again and are able to see the relevant details of our lead on those platforms.
2. And reflect some key milestones from those platforms inside ALP.

The implementation will happen in two phases:

1. **In MVP, there won't be any integration. We will have a system in which all the updates of these workflows happening outside the system will be updated 'manually' by someone in ALP. We will provide requisite access to designated team members at a card level across all these tabs to update.**
2. After MVP launch in March, when integrations are complete:
 - a. Approval tab cards will be updated via Board integration
 - b. Legal tab cards will be updated via Sirion integration
 - c. Construction tab cards will be updated via R-Dash integration
 - d. Finance tab cards will be updated via FR Portal/ SAP integration

Details of MVP phase:

1. Common points across all 4 tabs -
 - a. There won't be any view access restrictions for anyone. Anyone who can see the lead on the homepage should be able to see the content on these tabs.
 - b. For simplicity, we can keep all these tabs open for updates right from day 0
 - i. Because at least two activities - LDD (in legal) and SDR (in construction) start before approvals start coming in.
 - c. While I have proposed that ownership to manually update cards within a single tab should be with one team, there would be exceptions. E.g. under the construction tab, some cards would be updated by the RE team while some would be updated by the EPC team.
 - d. Only the person who has the privilege to update, should be able to edit the status if needed. If it happens, it should reflect the changes on the activity log as well.
 - e. **Hence, we would have to create this flexibility in our RBAC system: Within a tab, there would be different people from different teams who have the privilege to update the status of some cards.**
 - f. The UX of the cards have slightly changed
 - i. The title of the card which basically talks about the workflow step

- ii. There's an option to select the date. This is the date which will be used to show the 'Day N'.
- iii. Drop down values for update. In most cases, it will be just one value 'complete'. Exceptions
- iv. Copy changes pending on design
 1. 'Assigned to' has to be removed
 2. 'Upload supporting document' and not 'screenshot'
 3. 'Pending with' has to be removed
 4. There's no 'Pending status' to be shown anywhere in the cards
 5. There won't be any explicit 'Approve' or 'Reject' CTA on any cards.
- v. This screenshot shows the correct before and after update status of the cards.

The screenshot displays a web form titled "LOI (Letter of Intent)". It is divided into two sections: "Before" and "After".

Before State:

- Completion Date:** A date picker showing "Jun 07, 2023".
- Status:** A dropdown menu labeled "Select Status" with a downward arrow.
- Upload Document:** A dashed box containing a button labeled "Upload Supporting Document" with a document icon.
- Update:** A blue button labeled "Update".

After State:

- LOI (Letter of Intent):** The title is followed by a pencil icon.
- Completion Date:** The date is now "2025-01-08".
- Status:** The status is now "Completed", indicated by a green checkmark icon.
- View Proof Attachment:** A link with a document icon.

2. Specific points related to each tab:

a. Approval tab:

- ~~i. The list of cards might change in the coming days.~~
- ~~ii. Also, there are chances that each card may have three child-updates for approvals. E.g. Termsheet approval may have just one card but within it we will have to update RE has approved, BT has approved, CBO has approved. Will try to have a simple update access rule for it.~~
- iii.

Site Approvals
Site selection, Design & Commercials Manager
EPC Contractor Selection
Quality & Quantity - Business Ops Certification
Quality & Quantity certification - Third Party

iv.

Business Approvals

Approved by NSO Team
Approved by RE-Team
Approved by Format Head
Approved by Format CFO
Approved by NSO Head
Approved by Offline CEO
Approved by Business CFO
Approved by Business CEO
Approved by RRVL CFO Office
Approved by RRVL CLT
Approved by Apex

- v. Values in the drop down to be updated in each card:
 - 1. Approved
 - 2. Not applicable
 - 3. Rejected
- b. Legal tab:
 - i. Mainly the legal team (part of RE team) will have access to it.
 - ii. The LDD process (first card) can get completed even before any approval comes
- c. Construction tab:
 - i. The set of tabs to be updated will split between RE and EPC
 - ii. The SDR process (first card) can get completed even before any approval comes
- d. Finance/ Payment tab
 - i. Payments are made only after all approvals are done.

Additional Forms

1. We will work on only SOW form in MVP
2. Rest all forms will be marked as 'Coming Soon'
3. Data submitted via these forms would be shared with other platforms after integration.
4. Access:

- a. Read access would be for everyone who can click on a lead and land on details page
- b. Update/ Edit access would be with a particular function for each form.
 - i. For the 6 forms shown in mocks, the RE team will have update/edit privilege
 - ii. For SOW form, it should not be editable after approvals start on the approval tab.

Emails

(Will update tomorrow)

Audit Trail

At the backend, we should maintain a table with a trail of who (email ID) took what action on the platform for each lead, including status changes, edit, and delete. Let's also save the information of leads that were deleted in that table.

AI summary

Not in scope for MVP (March)
